CYBER SECURITY TRAINING FOR BUSINESS OWNERS & LEADERS

CYBER SCALE

Why train your leadership team?

Almost half of all organisations in the UK fall victim to cyber security breaches every year, often leading to personal data breaches, interruption to business, financial loss and reputational damage.

Many businesses still treat Cyber Security as a technical IT problem and believe the fallacy that they are not a target, but more and more are realising that Cyber Attacks such as Ransomware and business email compromise (BEC) represent a key business risk requiring visibility and focus at the executive level. This is where our cyber security leadership training comes in.

This half-day, non-technical cyber security leadership training course is designed to help business owners and leaders understand the key elements of cyber and information security related risks and practical steps required for a comprehensive cyber security strategy appropriate to their business.

We know that your job is flooded with requirements from all angles so we have balanced this course to be technical only where it has to be – the majority being about understanding the non-technical, pragmatic steps your teams can take to protect your business and how they should be setup to take them whilst still ensuring the business runs the way you need it to. Cyber Security is a business wide issue, not just a technical and systems one.

Learning & Collaboration

Learning how to better protect your business and staff will be combined with the chance to mix with and learn from other leaders facing the same challenges at your level across a range of industries, which can be very impactful. We are all fallible and collaborating around cyber security will benefit all businesses beyond the training.

This course focuses on:

- Understanding Cyber Security from a business perspective
- Understanding relevant regulations and laws
- Key risks and business implications
- Common mistakes
- Planning your Cyber Security Strategy – Key Steps

No specific technical knowledge is required; however, an appreciation of how electronic data is utilised within the business will ensure maximum benefit is gained from the course.

The course will include both presentation and group exercises to help attendees get to grips with identifying risks relevant to their organisations. The course runs from 9:30am through to 12:30pm. Refreshments are available from 9am, and will take place at CyberScale's dedicated training facility on the outskirts of Norwich or Online.

CyberScale has extensive experience in designing and delivering business focused Cyber and Information Security training and workshops for many types and sizes of organisation; but, don't just take our word for it, here's what some of the previous attendees had to say:

"We're seeing more and more cybercrime in the UK, and it's important that we provide our people with the relevant training. CyberScale approached this project collaboratively, and really took the time to understand us and the housing sector. We found their employees knowledgeable, and the interactive sessions were exactly what we were looking for." – Nadine Tapp, Head of Flagship's Academy

"Darren's delivery was excellent and easy to understand" – Yaxham Waters Holiday Park

"Excellent course pitched at the correct level for people who are not IT professionals" – Seajacks
