CYBER SECURITY STAFF AWARENESS TRAINING

CYBER ▲ SCALE

Almost half of all organisations in the UK fall victim to cyber security breaches every year, and over 80% of these involve some form of human error. These incidents often lead to personal data breaches, interruption to business through Ransomware, financial loss through invoice fraud and reputational damage, so ensuring your staff have the awareness to make informed security decisions is key to prevention and detection.

This half-day, interactive cyber security awareness training workshop is suited to non-technical team members within your organisation. Your staff will learn how to protect themselves and your organisation from cyber criminals and other threats, both in the workplace and at home.

The course will provide visibility across the whole workforce, introduce cyber security fundamentals to your teams and showcase the business and personal impact of security incidents. Alongside this they will gain an understanding of key types of incidents and how to protect themselves in their personal lives, at home and your business.

This is not your standard computer based training. It's highly interactive with attendees working together in group exercises to deeper understand why cyber security breaches happen and not just what they are. Delivered by our experienced security consultants who have a wealth of real world experience this training will be of value to both your business and your employees personally.

No specific technical knowledge is required; however, an appreciation of how you use technology in your role will ensure maximum benefit is gained from the course.

By participating in this course, you will:

- Learn what cyber security is and why everyone is a target

- How to prevent common forms of human error, such as password and email security

- Key types of cyber incidents

- How to protect yourself at work and at home

The course runs from 9:30am through to 12:30pm. Refreshments are available from 9am, and will take place at CyberScales' dedicated training facility on the outskirts of Norwich.

CyberScale have extensive experience in designing and delivering business focused Cyber and Information Security training and workshops for many types and sizes of organisation.
