SECURITY ASSESSMENT AND ROADMAP

CYBER ▲ SCALE

A security assessment from Cyberscale will help you identify the risks to your business and any gaps in your information security. We will identify and help you understand the technical measures, policies, processes and training that you need to keep your business and your client's data secure.

Cyberscale's pragmatic approach helps clients turn security into a competitive advantage. When businesses can readily demonstrate their security aptitude to clients this fosters trust that opens doors to new business relationships and strengthens existing ones.

Our Customer Centric Approach

Unlike many security companies, we do not speak in technical jargon and we are not biased towards selling you our pet technology. Clients see us as a trusted specialist adviser who helps them navigate unfamiliar territory.

Where Are You Now?

The first step in improving security is understanding where your business is at today – the data you rely on to run your business, the importance and sensitivity of it, and the systems that store and process it.

By speaking with your key personnel, we can understand your organisation's unique combination of culture, approach to risk and regulatory obligations so we can offer pragmatic advice tailored to your exact circumstances. For a cybersecurity organisation, we think you will find us refreshingly human.

The Assessment Process

1. Discovery Workshop
We will spend time to understand your organisation, your priorities, data, systems, people, processes, clients and concerns.

2. Analysis & Risk Identification
Based on a full understanding of your business, we'll analyse and identify the threats, risks and areas for improvement.

3. Report & Roadmap
Our comprehensive report outlines key areas of risk and impact, along with recommendations for improving your security and reducing your risk. All presented in an easy to follow roadmap.

4. Presentation and Explanation
Your senior consultant will clearly explain your report and roadmap in plain English, answering any questions you may have and ensuring you are prepared for the next steps.

Where do you need to get to?

Whether you simply want to have the assurance that your information security is 'done right' or you need to demonstrate formal compliance with a particular security standard, such as ISO27001, your Cybersecurity Roadmap will show you exactly how to achieve it. This will be done in reasonable steps that can be achieved without getting in the way of running your business.

How We Create Your Cybersecurity Roadmap

Your Cybersecurity Roadmap is tailored to the needs and circumstances of your business. Cyberscale will meet with key members of your team — both business and technical — so we can identify the risks that threaten your business today and create a clear action plan to secure it tomorrow and for the future.

Depending on the size and complexity of your business, we will spend one or two days at your offices or via remote workshops with different members of your team. We will ask about the IT systems you use, the data you hold and how that data is used and shared inside and outside your business.

We will also ask for copies of policies you have in place that relate to information security and any plans for dealing with emergencies. Our workshops are structured yet relaxed and clients often find the systematic review enables them to identify and mitigate risks they had not previously considered.

We use information gathered during these sessions to create your Assessment Report and Cybersecurity Roadmap. Your Assessment report will provide you with a clear picture of your current areas of risk and what they could mean to your business.

Your Cybersecurity Roadmap will describe the steps that need to be taken to protect the business from urgent threats today and show you how to put in place the technical and organisation to secure the business for tomorrow.

We will identify where it makes sense to adopt an existing security standard (such as ISO 27001 and guide you through the certification process.

Clients often ask us to help with the implementation of the roadmap either as an advisor to their own project team or by taking charge of the whole project on their behalf. Whichever route you choose, Cyberscale is with you for the journey.

Why CyberScale?

Cyberscale is a specialist cybersecurity firm. We provide independent, expert advice based on years of practical, real-world experience
