CYBER SCALE

CYBER SECURITY MEANS BUSINESS.
IN EVERY SENSE.

Traditionally, valuable commodities were more straightforward to secure. Businesses dealing in oil for example really only had physical security to consider - lock it up, guard your facilities, job done.

But in a world where data is more valuable than oil - a world where data is critical to everyone's business, and that data no longer lives within your four walls, the question of how to secure it is much bigger, and the answers so much more complex.

How do you know where to start? Where do you focus resources when time and budget is typically limited?

There is no single answer, and you should be wary of anyone who suggests otherwise.

How best to secure your business depends on your business alone, and your business deserves a tailored, risk-based strategy.

Many organisations cannot afford in-house expertise to cut thvrough all the claims, and noise, to deliver the security solutions and practices that it really needs.

Help is out there.

Find a partner who does have the expertise. A partner who makes securing your business, our business.

When choosing a partner to help secure your business, you need independent experts you can trust.
We're CyberScale, and this is who we are.

Specialist

We're not an IT support company who also sell a limited portfolio of security technology as an add-on to our core business.

We're a specialist Cyber and Information Security company.

Integrity

We do what we say we will and always act in our clients' best interests.

If there's an area which isn't our specialty, we'll be honest about that and help you find the right help.

Knowledge & Experience

One of the biggest challenges when securing your business is that you don't know what you don't know. We can help.

Our specialists have a wealth of security qualifications such as CISSP and ISO 27001 Lead Auditor, and significant experience applying it in a business context.

We can focus on keeping your business secure, so you can keep your focus on your business.

Collaborative

At CyberScale, our team help businesses protect their data and reputations from current and emerging cyber threats. We'll work with you to build a detailed understanding of your business from a security perspective, to provide a clear picture of your risk areas and create achievable action plans.

We'd rather teach you to do as much as you can yourselves, but we'll be there to provide ongoing assistance and guidance when you need it.

Pragmatic

Security doesn't work if the business can't function.

Our effective, but pragmatic security strategies are based around the most appropriate mix of process, people and technology, and are delivered in close collaboration with each clients' own teams and other specialist partners.

We believe effective security should be a business enabler - not a blocker to agility and productivity.

Always Learning

Cyber Security moves fast.

We are committed to learning and staying current and allocate our teams dedicated time each week to keep up with the latest threats and security trends, so you don't have to.

Our security specialists are dedicated to providing the very best security advice for your business.

Services - Securing your Business

Want to make sure your business is as safe as secure as it needs to be? We can help.

Security Assessments

Your business data is valuable, and that makes it an attractive target for cyber criminals. You and your customers want to know your business is secure, and our Cyber Security Assessment will identify your risk areas and weaknesses before someone else does and provide a clear action plan to imrpovde your security and resilience.

Remote Working Security

With new ways of working come new threats and risks to your business.
We can help you understand and manage the risks to keep your staff working securely, wherever they are.

Security Policies

You know your business and we know security. Regardless of whether you're aiming for security standard compliance or just want to make sure your business is operating securely, we will work with you to define security policies and processes that keep your staff secure, compliant and productive.

Cloud Security

The Cloud is not secure by default. Cloud providers consider security a 'shared responsibility'- they can only do so much to secure your data, the rest is up to you. We can help. Our experts will make sure that moving your services to the cloud will improve your security and reduce your risk – not the other way round.

Security Technology Evaluation

When it comes to security, Technology vendors and resellers will tell you their product can do it all - but as independent, impartial experts we'll let your business' security needs do the talking.

Taking into account your budget, in-house skills, existing systems and specific requirements, we'll tell you which tools are best for you, not us.

Services - Standards & Frameworks

The right Security certification can set your business apart. Let us show you how.

Our security specialists are experienced with many security frameworks including ISO27001, Cyber Essentials, NIS, CIS, PCI DSS and DSPT- but we'll only suggest using these where they make sense for your organisation. We reference them as a means to an end, not the end itself. Compliance and security aren't the same thing.

Cyber Essentials

A Cyber Essentials certification shows your clients, and potential clients, that your organisation takes cyber security seriously.

Cyber Essentials is also a mandatory requirement for many UK public sector contracts, so if you're wondering how Cyber Essentials could benefit your business, our experts can show you the value and guide you to certification.

ISO 27001

If your organisation is serious about security, then ISO 27001 is the standard that could put your business ahead of the pack.

Internationally recognised and respected, ISO 27001 certification tells your clients, partners and suppliers that you walk the walk when it comes to Information Security - and you have the documented processes and practices to prove it.

Our certified ISO 27001 experts know what it takes to achieve the standard, and can help bring all the benefits of certification to your business.

Services - Professional Services

Your business may not have a dedicated Security team, but that doesn't mean you can't access the expertise you need.

Training

Educating your organisation at every level is key to keeping your business secure.

Whether you're educating your senior leaders, skilling-up your IT team or training your staff to be 'Human Firewalls', CyberScale has extensive experience in designing and delivering business-focused cyber and information security training for organisations of all types and sizes.

Cyber Security Strategy

Does your business have a cyber security strategy? More importantly, do you know what a cohesive cyber security strategy could mean for your business? If the answer to either of these questions is ‘no’, talk to our specialists. A tactical, piecemeal approach may be like installing a gate in an open field - a strategic approach will expose the whole field, and how your gate can be an effective part of protecting it.

Incident Response Planning

Don’t let the first time you think about incident response be when you’re responding to your first incident. You need to be prepared. A quick, decisive and rehearsed response is critical to get you back up and running with minimal delay, cost and damage. You may hope for the best, but we can help you plan for the worst.

Virtual CISO

The most effective business security strategies come from the top. 'Buy-in' from the leadership is great, but does your Senior Management have the information they need to actually drive Information Security strategy?

Within many organisations, a gap exists between Senior Management and IT, especially when it comes to Security. Our Virtual CISOs can help bridge that gap.

CYBER SCALE

CYBER SECURITY MEANS BUSINESS.
