SECURITY POLICIES

CYBER SCALE

CyberScale are experienced in guiding businesses through the sometimes daunting task of ensuring all required and relevant security policies are in place without unnecessary disruption to your business.

Security policies are an important part of an organisations security strategy. They can be used to guide the implementation of your security strategy in regard your company and customer information and IT systems. Policies should be used as a reference for creating further, more detailed, procedures or when making decisions with regards to the organisations technology and processes. They can help reinforce the confidentiality, integrity and availability of data within the business and can also help employees know what to do under certain situations and circumstances to further minimise risk.

Policies and procedures are necessary and very often a requirement in order to comply with certain industry regulations and legal requirements. They ensure essential tasks are carried out in a consistent way, further limiting risk to the organisation as much as possible.

Creating the right policies and procedures can be a daunting task, especially if you are not sure what policies would complement and benefit your type of business and, importantly, how to ensure staff are engaged with following guidance contained within. This is where CyberScale can help, throughout the entire process.

CyberScale are vastly experienced in creating security policies unique to individual business needs and inclusive of any regulatory requirements appropriate to your organisation. Following a security assessment with your key personnel, we can recommend what policies you need as well as help to identify any areas of existing policies which may need updating or amending whilst ensuring your business continues to run efficiently. All too often policies can dictate requirements without considering the effect on the continued efficiency of your business. CyberScale will ensure the content of any policies created for your organisation reflect your business needs and do not include unnecessary requirements which would be impossible for you to implement.

The Discovery and Creation Process

1. Discovery

1.

Through a combination of talking with your team and reviewing any existing policies and procedures we will determine what policy requirements are important to your organisation and the necessary policy content in order to be compliant with any industry regulations or certifications.

2. Recommendations

We will provide a report clearly outlining which policies we recommend and the order of priority, along with a timescale for the creation of each recommended policy.

2.

3. Creation

3.

Policy drafts will be created in order of priority for you to review before a final draft is approved and developed.

4. Implementation

Once any policy is approved CyberScale will be available to work with you on the best approach to implementing each policy in the most appropriate and effective way for your business and your staff.

4.
