TRAINING FRAMEWORK

CYBER SCALE

The most effective way to inform your staff about the risks they should avoid, and how to respond in uncertain situations, is through robust cyber security training.

Cyber security training is central to building awareness amongst staff at all levels across the organisation. As the number of threats to organisations continue to grow, it is important to take time to build resilience into your organisation, and starting with your people is a sound move.

Almost half of all organisations in the UK fall victim to cyber security breaches every year, and over 80% of these involve some form of human interaction. These incidents often lead to personal data breaches, interruption to business through Ransomware, financial loss through invoice fraud and reputational damage, so ensuring your staff have the awareness to make informed security decisions is key to prevention and detection.

Our Training Framework is scaled to meet the needs of your organisation, and provides an optimal combination of expert delivered training, digitally delivered awareness, managed phishing simulations and regular, sector specific news designed to balance impact and scalability and keep security front of mind, both in business and at home.

TRAINING RESOUCES

- Access to an on demand onboarding training session gives all new staff an immediate overview of cyber security and risks within the business.
- Interactive, online or onsite consultant-led sessions cover general awareness training, leadership training, and role specific training for roles such as HR, IT and Finance.
- Regular phishing excercises to test and improve staff awareness around suspected phishing emails with reporting and tailoring to ensure continual improvment.
- Online training throughout the year for your staff via an online training platform. Training can be monitored, and reports generated of staff progress and knowledge.
- Visual resources which can be distributed or displayed within the office to keep security at the forefront of your staff's mind and are provided at six monthly periods
- Initial KPI setting which is reviewed quarterly, and an end of year Measure of Effectiveness (MoE) Review.
- Regular updates sent to staff through monthly newsletters, containing up to date resources around cyber security tailored to your industry.
